Capabilities
Battle Road's AtomEngine is a modern, 3D constructive simulation platform that provides an easy to use, out-of-the-box solution for COA Development, Analysis (Wargaming), and Comparison. The platform offers commanders, planners, staff, & students the ability to model large-scale strategic campaigns and small-scale tactical operations across all domains, then wargame them live with other connected human and AI opponents. AtomEngine provides immersive 3D terrain, infrastructure, assets, and natural phenomena for any location on the planet. It is accessed from the browser by default so users can join from anywhere using a link and a login. The platform can be deployed to a secure cloud environment, on-prem, or on an air-gapped system. - Operational multi-domain wargaming from division to company echelons - Plan full campaigns spanning days, weeks, or months with accurate day/night cycles - Sustainment and resupply modeling, both within and external to the theater - Branching exploration of key decision points - Multi-user live wargaming sessions with asymmetrical awareness - Automated after-action reports which generate up-to-the-minute results - Variable time scales from real time up to 10,000X - Simulated natural phenomenon including weather and flooding - Intelligent terrain that's both physically accurate and integrated with the simulation. - AI-controlled autonomous agents - Support for cloud hosted, on-prem, or air-gapped deployments - Browser based for easy maintenance & reduced hardware costs - Massive library of interactive USN, USMC, USAF, Army, NATO and adversary entities - Extensive integration with existing terrain, sensor, and environmental data sources

Customers
USAF, USMC, EUCOM, PACOM, NPS, FCC
